

Eliminate Downtime with a Solar Charging System

Go Power![®]

An independent and self-contained solar/battery system in a trailer can power lights and monitoring equipment and recharge a separate battery bank without the burden of connecting to an alternator.

GP-PC-20

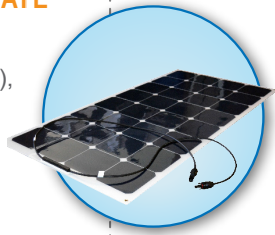

TELEMATICS

Solar will maintain the battery charge to offset parasitic loads.

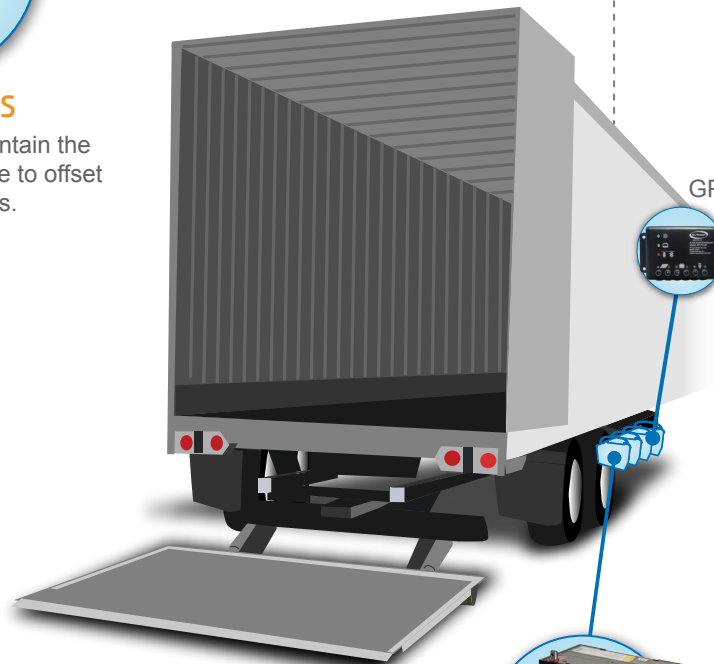

SOLAR WILL KEEP YOUR LIFTGATE WORKING ALL DAY

Solar Flex modules are flat (1/8" thick), meaning no height restriction implications.

An average liftgate system packs 200 watts of power, and has an average two-year ROI.

REFRIGERATION UNITS

Eliminate the need for jump-starts—solar ensures a constant charge to the battery bank.

During long periods of trailer inactivity, batteries remain topped up and ready.

Solar charging could double battery life.

LIFTGATE

Solar provides a continuous charge to the battery bank 7 days a week while driving or during stationary periods.
