

SOLAR FLEX™ GO POWER! SOLAR FLEX POWER SYSTEMS

Solar extends operating time of your HVAC, hotel loads, and lights — without idling.

APU MAINTENANCE

Reduce the runtime of your APU motor to maintain battery charge.

COMFORTABLE LIVING

Solar reduces the need to plug in when parked.

A properly sized inverter provides a "clean" source of AC power for electronics and appliances.

BATTERY BANK CHARGING

A solar controller regulates the state of charge in the battery, which maintains the health and extends the battery life.

AC + DC Solar Flex™ Power Systems

Various sizes of systems are available to customize a perfect-fit solution. Systems support deep cycle, AGM, and lead acid batteries.

- The lightweight Solar Flex module contours to a truck cab, trailer body, or truck box, with adhesive or screw mounting options.
- 10 or 30 amp solar controller helps prevent batteries from overcharging.
- Economical and powerful heavy-duty inverter charger. Provides 3000W AC power, 125A shore power charging with automatic transfer switch: 2 legs at 50A each (240 VAC split-phase).
- Deep cycle AGM battery, designed for solar and inverter use: 12 volt, 110AH @ C100.

COMPLETE ANTI-IDLING SYSTEM

A Solar Flex system provides an independent and renewable power source. Once installed, there is very little maintenance involved.

Solar constantly tops up the battery bank to ensure ample mobile power is available, wherever it is required.
